

International Infection Prevention Week

Nursing Unit Toolkit

Suggestions for Unit Leaders

- During International Infection Prevention Week (Oct 15-21, 2023), use this toolkit to engage staff in Infection Prevention topics
- Post completed toolkit slides on huddle boards
- Reserve a GloGerm/GlitterBug kit from HEIP (quantities limited)
- Encourage staff to complete the HEIP Staff Education Survey
- Support staff in attending an International Infection Prevention Week event
- Thank your Infection Preventionist!

PREVENT INFECTIONS,
SAVE LIVES

PREVENT INFECTIONS,
 **SAVE LIVES**

October 15-21, 2023

CELEBRATE the FUNDAMENTALS of

The logo for Infection Prevention (IP) is enclosed in a blue rounded square. It features the letters 'Ip' in a large, bold, light blue font. Below the letters, the words 'INFECTION' and 'PREVENTION' are stacked in a smaller, all-caps, light blue font.

GloGerm Demonstration Instructions

Contact HEIP for supplies (x34343)- 2 days notice required

1. Shake bottle and dispense a dime-sized drop into the palm of one hand
2. Spread completely over both hands, including under nails, around cuticles, and between fingers, as if applying hand lotion
3. In a dark room, place hands under UV light to view “glowing germs” that exist before hand washing
4. Clean hands with soap and water
 - Scan to watch proper technique:
5. Place hands under UV light
 - Hands are very clean if there are no remaining “glowing germs”
 - Bright spots show hard-to-clean cracks and crevices

CAUTION: Avoid use on persons with known skin allergies. Do not allow lotion to contact clothing as staining may result.

PREVENT INFECTIONS,
SAVE LIVES

Infection Prevention Tip of the Day

- The single most effective way to prevent the spread of infections.
- Alcohol-based hand rub kills germs on hands. Soap and water washes them away.
- Soap and water reduces the amount of contaminants on your hands.
- Nail maintenance is a key aspect of hand hygiene.

Infection Prevention Tip of the Day

- Cleaning visible dirt and debris off surfaces is an essential first step to disinfection and sterilization.
- Mixing chemicals can be dangerous. Always follow manufacturer's instructions for use (IFU) for the disinfectant you are using.
- Always follow the manufacturer's instructions for use (IFU) for the device you are cleaning.

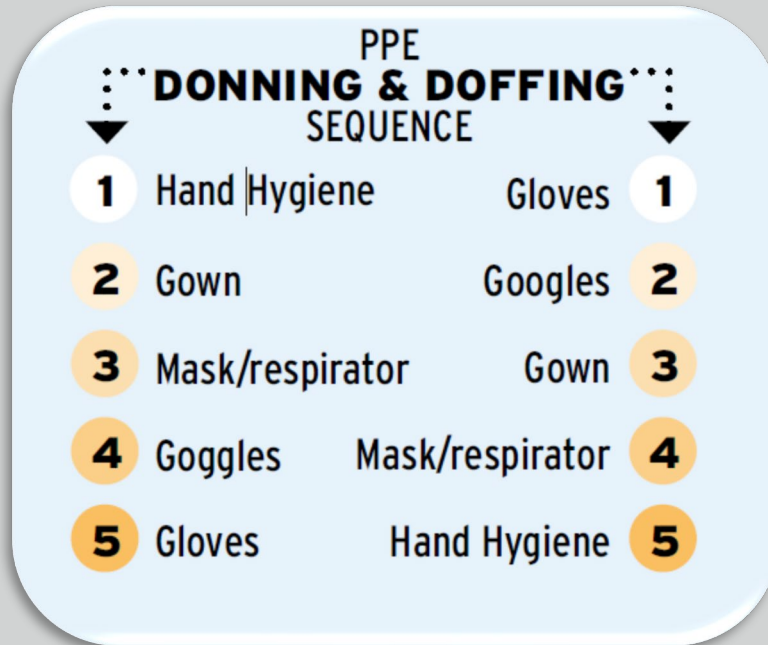

Infection Prevention Tip of the Day

- Vaccination protects the people who receive them and also those around them.
- It may still be possible to get an infectious disease even after being vaccinated for it.
- Vaccines can decrease the severity of illness and the likelihood of hospitalization and death from the illness.

Infection Prevention Tip of the Day

- Use PPE whenever there is an expectation of possible exposure to infectious material.
- Know the sequence of putting on and taking off PPE to reduce the risk of contamination.
- Gloves are not a substitute for hand hygiene.

Infection Prevention Tip of the Day

Sometimes Six Feet **IS NOT ENOUGH**

Cover sneezes and coughs.

Wear a mask.

Properly dispose of tissue.

Wash/sanitize hands.

Limit touching in communal spaces.

Don't touch your eyes, nose or mouth.

- Covering coughs and sneezes helps prevent the spread of germs that cause serious respiratory illnesses.
- Respiratory season extends beyond winter. Be prepared 365 days a year.
- Have tools for success: tissues, masks, soap and water, hand sanitizer, and trash receptacles.

Infection Prevention Tip of the Day

- Protect yourself from sticks: Use a sharps device with safety features.
- Prevent bloodborne pathogen transmission: Clean and disinfect glucometers with every use.
- Technique matters: Injection safety requires an aseptic or sterile technique.

International Infection Prevention Week

- Meet your Infection Preventionists
- Hand Hygiene Campaign Contest Showcase and Winner Unveiling
- Flu Shots for Staff provided by OHS
- Games, Trivia, and Prizes!
- Take our staff education survey and receive a prize*!
