

Problem: How do we quickly evaluate and document all the patients who want to be seen for Covid-like symptoms?

Solution: Colleagues from the ED, the new Respiratory Symptom clinics, the new ED screening tents (ACUs) and Primary care clinics brought their collective experience and agreed on a single template.

It is a standard note template which will appear when we open Notes for providers in RSCs and primary care clinics, as well as the ED.

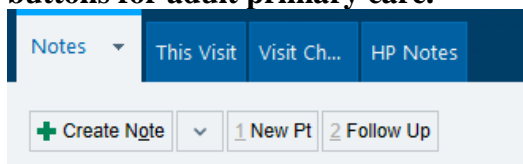

Use this dot phrase to document a rapid screening note in the RSCs, and for providers seeing COVID screening visits in all clinics.

It qualifies for a Level 3 visit ALONE, obviously you can add more to it for more complex visits.

The dotphrase containing this note template is live in Apex.

.COVIDRAPIDSCREENNOTETEMPLATE

On 3.11.20, this note template will be added as a note template speed button for primary care and RSC clinics. The speed button will be seen just after the New Pt and Follow Up buttons for adult primary care.

This SAME NOTE template will be used in RSCs, ED and in PC clinics making it seamless and easy to train providers.
