

UCSF NON-AGP PRE-PROCEDURE POINT OF CARE (POC) ABBOTT ID NOW COVID-19 TESTING AT THE ASYMPTOMATIC TESTING CENTER (ATC)

PROCEDURE CLINIC

1. Clinic identifies patient who needs a procedure approved for pre-procedure POCT through CATCH (Procedure list provided to CATCH team before hand)
2. Clinic patient coordinator (PC) schedules the procedure appt. At the same time, PC schedules ATC appt 30 mins prior to the procedure arrival time.
3. PC indicates "POCT- procedure clinic name" in the appt notes of ATC appt
4. PC places the pt into "Care Path" to have pt enter CATCH workqueue

*If urgent add-on or same-day procedure, clinic RN/ APP to order the POC test

PROCEDURES MOVING FROM PCR to POCT (Current and Future)

- IR - NJT, Thoracocentesis, Chest Pleurex
- Dx Rad: Head, Neck and Lung Biopsies
- ANCRE Clinic (Hyfreaction)
- Dermatology: Mohs, Laser Tx, PhotoRx
- Cath lab, EP Lab, CPET
- PPU: Liver and kidney biopsies
- CRH: pre-stimulation testing, OB

ORDERING OF PREPROCEDURE POC COVID TEST BY CATCH TEAM

1. Patient shows up on the CATCH workqueue
2. CATCH RN confirms it is a POCT approved procedure and places POC COVID order (Abbott ID Now) per RN protocol
3. CATCH RN confirms there is an ATC appointment or schedules one if not.
4. CATCH RN informs procedure clinic that POCT order placed and removes patient from workqueue/ care path once POCT order placed

*If PCR more appropriate, CATCH RN to order & schedule PCR, cancel POCT appt and inform procedure clinic.

** For fragile patients unable to navigate b/w ATC & procedure clinic, clinic to contact ATC prior to appointment date. ATC can help arrange for transportation from ATC to Procedure Area or coordinate having swab collected in clinic and sent to the ATC

DAY OF APPT AT ASYMPTOMATIC TESTING CENTER

1. Patient arrives at the ATC 30 mins prior to procedure appt
2. ATC staff checks in patient for ATC appt only
3. Patient self-swabs while observed by ATC staff
4. Patient will wait for their results at the ATC prior to proceeding to their appt/ house check-in.

NEGATIVE POCT RESULT

1. ATC staff gives pt a green sticker card
2. Patient proceeds to their appt & shows green sticker card at procedure clinic FD to complete check-in process.
3. ATC FD arranges for transportation if patient needs assistance

POSITIVE POCT RESULT

1. ATC RN confirms patient is asymptomatic*
2. ATC RN gives patient a red sticker card & informs pt of the need for a confirmatory test
3. ATC RN orders and collects a **STAT COVID PCR**
4. ATC RN counsels the patient on isolation and informs that CRISM team will contact patient
5. ATC staff informs procedure clinic of POC positive result & confirms procedure is cancelled

*If pt is symptomatic, ATC RN calls/ voaltes RSC Front Desk for an acute visit

KH: Ted Scheel/ Erin Schwartz

It is rare that the appt cannot be delayed. ATC to escort pt to destination clinic as a PUI

Can the Appt be Delayed?

Destination clinic cancels subsequent appts until confirmatory tests completed and informs subspecialty

Patient is discharged as **PRESUMED COVID POSITIVE**
 CRISM RN to followup COVID PCR

1st PCR result?

INCONGRUENT RESULTS: Additional Workup
 CRISM Team orders the "Confirmatory COVID Test Order Panel" with Ambulatory Referral for scheduling repeat STAT PCR and serology at LH DriveThru or MZ RSC

CONGRUENT RESULTS: Confirmed Positive

1. CRISM automatically notified of positive PCR
2. CRISM notifies pt, PCP and subspecialist
3. Destination clinic follows COVID+ protocol for future appointments/ treatments
4. ATC RN calls central scheduling to cancel 2nd PCR, IgG and LH DriveThru/RSC appt

Repeat (2nd) PCR?

1. CRISM RN reviews results with HEIP
2. HEIP clears COVID flag and updates POCT result in APeX
3. CRISM RN explains results to patient and informs subspecialist
4. Destination clinic calls pt to reschedule. Schedule POC as well if >7 days
