IMMUNOCOMPROMISED ISOLATION

Clean Hands

before and after entering room

Visitors ~ See Nurse before entering

PATIENTS in STANDARD-IMMUNOCOMPROMISED Isolation

- S/he does **not** require a private room, except re-admitted BMT patients.
- Recovery after procedures can occur in post-op recovery area. Personnel in recovery area should be notified that patient is at risk for infection and precautions should be taken accordingly.
- S/he is encouraged to stay in his/her room.
- S/he will be allowed to leave their room with a mask.
- S/he is NOT allowed to participate in group activities, but can go to **private play/neutropenic time** in the teen lounge, school room, playroom and AllStars technology room.

STAFF Caring for Patients in STANDARD-IMMUNOCOMPROMISED Isolation

- **Clean hands:**
 - Before and after touching a patient
 - Before and after touching a patients' surroundings
 - Before and after IV access or procedures
 - Between dirty and clean tasks
 - After touching your face, nose, hair or personal device (e.g. pager, phone)
- **Instruct families and visitors to clean their hands** before entering and exiting the patient's room.

GENERAL INDICATIONS for STANDARD-IMMUNOCOMPROMISED Isolation

- **BMT patients** being readmitted as long as ANC>500 and they have recovered t-cell immunity.
- **Neutropenic** patients (ANC < 500) on hematology/oncology service not meeting criteria for Strict or High-Risk Immunocompromised Isolation.
